

# Emerging Forms of Knowledge Expression

Monday, April 16

4-5:30 pm

University Hall 201

## Geoffrey C. Bowker

Professor at the School of  
Information and Computer Science

University of California, Irvine

Presented by the 2011-2012 Klopsteg Seminar  
Series in SCIENCE IN HUMAN CULTURE.

Co-sponsored by the Media, Technology, and  
Society Program.

Who gets to read the products of our **knowledge assembly line**? In this paper, I explore the roots of our **current system of over-publication**. I then analyze some recent developments that change the relationship between knowledge (encapsulated in a scientific paper) and data (stored in a database). Finally, I argue that new kinds of knowledge can be developed within these new forms.
